Mpezeni

According to Coxhead, an Administrative Officer who published in 1914, there were at that time six minor chiefs under the Paramount. Four of these minor chiefs were sons of Mpezeni I.[19] Other Administrative records of the same period refer to ten 'subdivisions'. The Paramount Chief and the chiefs now in charge of counties 4, 14, 15 and 17 are each described as the 'important chief' in their subdivisions. The important chief in another subdivision is now not a county chief. The remaining four subdivisions had two chiefs each. Five of these are now county chiefs, one is a Cewa chief, and the remaining two are no longer chiefs. The title 'chief' was, however, not applied consistently by the Administration at that time and men who are called chiefs in some documents are called divisional or group headmen in others. In 1920, with the appointment of two new divisional headmen all Ngoniland villages in Northern Rhodesia were divided between ten rulers, not all of whom were called chiefs. Mpezeni II was ruler of one group of villages and Paramount over all ten, and the other nine rulers were the predecessors of the present minor chiefs. These ten groups of villages, and the two corresponding groups in Nyasaland, I have called *counties*. With one exception, each successive county chief has taken the name of his predecessor and this name is often used as the name of the county.

4. *County segments*

In each county there is one village known as the important village or capital. Many, but not all, of the villages in a county belong to the residential segment of which the capital is the headquarters. Thus we may speak of a county segment which forms, as it were, the core of the county. The villages that do not belong to the county segment fall into three main types. There are villages belonging to other segments under Mpezeni, there are a few which trace their origin to other Ngoni groups, and there are those which have entered Ngoniland after 1898 and so never formed part of the segmentary residential system. Most villages of the last type have come into Ngoniland from Cewa chiefdoms and some of them claim to have been settled in Ngoniland before the arrival of Mpezeni and to have been driven out by him. An indication of the distribution of villages in Northern Rhodesia counties among these different types is given in Table IV, where the only three counties for which I have the information are examined from this point of view.

632 634 621 In these three counties there were no instances of two other types of village found rarely in Ngoniland. Occasionally an immigrant labourer working on the Fort Jameson tobacco farms manages to attract sufficient followers from among other labourers and his local affines to found a new village in an Ngoni chiefdom. The other rare type of village is formed by direct administrative [648] action. The Administration has been largely concerned to amalgamate existing villages rather than to create new ones. In at least one instance, however, scattered clusters of huts inhabited by people who had fled from several different villages to avoid coming under agricultural control have been united into a new village under a headman of their own choosing. One example of each of these rare types of village is included in the sample of villages analysed in Table VII (p. 133).

621 631 634 TABLE IV. ORIGIN OF VILLAGES IN SELECTED COUNTIES, 1948

	Number of villages in county, classified by origin				
County	*County segment*	*Other segment under Mpezeni*	*Other Ngoni groups*	*Other tribes, joining Ngoni after 1898*	*Total*
X	60 (72%)	4 (5%)	1 (1%)	18 (22%)	83 (100%)
Y	26 (55%)	10 (21%)	0 (0%)	11 (23%)	47 (100%)
Z	59 (70%)	16 (19%)	0 (0%)	9 (11%)	84 (100%)
Total	145 (68%)	30 (14%)	1 (0.5%)	38 (18%)	214 (100%)

Number of counties in Northern Rhodesia under Mpezeni 10
Number of villages in Northern Rhodesia under Mpezeni 540 approximately

It will be seen from Table IV that about two-thirds of the villages in each of the selected counties belong to their own county segment. It is to villages in this category that the ties of a county chief are strongest. Here old and new systems are in accord and the chief acts both as traditional lord of the segment as well as head of the Native Authority. Villages in their county segment appear to be

had one son who died unmarried. The heir of Mpezeni I next after Nsingu was, therefore, the eldest son of the third wife in segment 10. This man's position in segment 10 was, therefore, equivalent to that of the eldest son of the second wife in segment 14, who was the second heir in that segment. Of these two second heirs, the latter, in the less important segment, was able to establish himself as the chief of county 17 whereas the former, in the more important segment, succeeded merely in becoming a village headman. Similarly, some lieutenants managed to become chiefs, others of comparable status did not. Wiese mentions six lieutenants by name. One of these became a chief, the other five did not. The segments of two other lieutenants, not mentioned by Wiese, became county segments and one other lieutenant became chief in the county of his lady's segment.

The evidence, therefore, suggests that we must look upon this transition from one system to another as no simple procedure by which indigenous forms of organization are taken over largely unchanged by a colonial administration. The change from an isolated expanding system based on warfare to a large-scale quasi-static system based on subsistence production and migratory labour provided opportunities for advancement for those who could adapt themselves more quickly than their neighbours. In one sense the really significant change came not in 1898 but in the 1920s, when the pattern of alignment became fixed. In the intervening period Ngoni society was still fluid, and an ambitious man had hope of securing advancement even as he had in the old days before the conquest, even though that advancement was achieved by different means and in a different context. It was after the twelve counties had been fixed, when it became clear that no more chiefs were to be made, that social mobility declined. With a rapidly changing external environment it was unlikely that this static condition would last, and with the growth of the Native Authority bureaucracy a new opening presented itself. Recently there are indications that further openings for the ambitious are being provided in the formation of parishes and in other schemes of rural development. But there are no new chiefs, even as there are no new plumed warriors for them to lead in battle or on whose behalf they can intercede with the tribal ancestors. Leadership in a society of half-peasants, half-proletarians, is based on other interests.

The salaries of chiefs are determined at an annual budget meeting held by the District Officer and attended by the chiefs and a few other men. The general outline of the tribal budget is suggested by the Administration, but on items of interest, such as

and the notched sticks were only an *aide-mémoire*, not a necessity.

The heavens and the earth

When the Pleiades appeared just before dawn they said the Pleiades were being 'reborn' (the word used for the new moon's appearance and for the initiation of a diviner), and that in this position in the heavens they were heralds of the cold season. They knew the relative positions of Venus as an evening star and a morning star, and watched for the appearance high in the heavens of Jupiter which they knew by its size. Orion they recognized as a man with a spear, a hunter, and the Milky Way as the sands of the sky, since sand was used to denote numbers which cannot be counted.

In announcing the death of a great chief by a messenger sent from village to village, the traditional formula was: 'Listen. Do you hear? The heavens have fallen.' Hence when earthquakes were felt, it was believed that some great chief had died, and the earthquake was the trembling when his spirit left the earth for the place of the departed spirits. If it turned out to be no one of their own people, they nevertheless held to the belief that somewhere, unknown to them, a 'great one' had died and his spirit had departed at the time of the earth's trembling.

Eclipses of the sun and moon they also connected with some great event either among their own people or elsewhere, and they used the eclipse year and month to date these events. Their famous crossing of the Zambezi on their northward march, finally and irrevocably cutting off their connexions with the south, was during a solar eclipse. In teaching young adults Ngoni history they said: 'When we crossed the Zambezi it became night at noon.'

A lunar eclipse, almost total, occurred when I was in a chief's village, and all the people were called to the kraal and stood watching it. Then the chief's spokesman, his 'mouthpiece', called for silence in the phrase used for a war summons
